Upgrade of Busy Student Bar

We were asked by the University to produce a design for their largest and busiest campus bar. Taking on the project from concept, through design and costing phase, to manufacture and installation, all within 6 weeks.

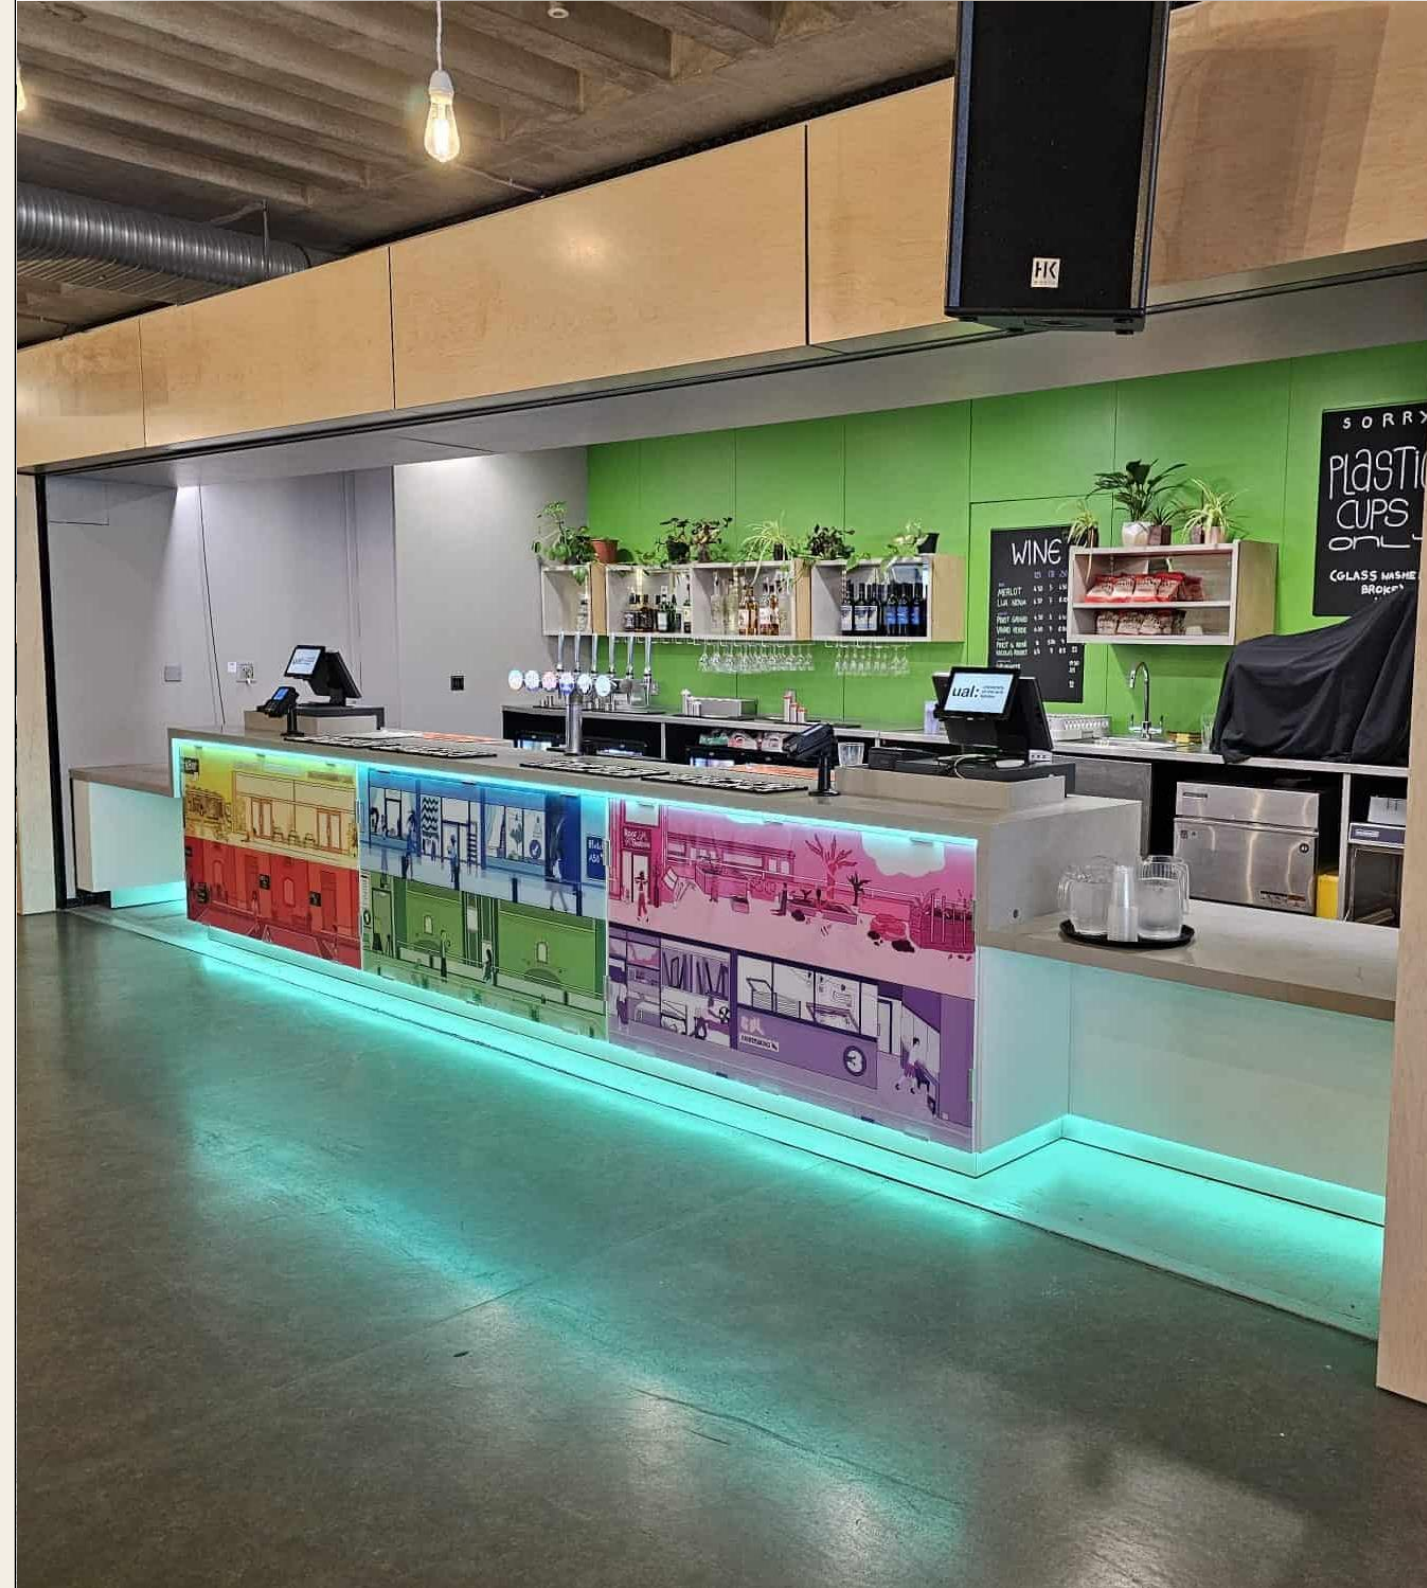

The remit, to incorporate a contemporary streamlined design with inclusive wheelchair access counters. The team wanted the bar to be easily updated so we designed an interchange panel system to the bars front space, allowing students to display their artwork. Displays can be changed throughout the year to keep the space fresh and engaging.

The bar is constructed in durable stainless steel with Corian tops and bar frontage incorporates interchangeable panels so artwork can be printed and changed periodically.

Facilitate Spaces undertook full strip out, flooring upgrades, electrical upgrades and plumbing connections.

Project Facts

- In house, design and build scheme
- Full strip out and installation including new finishes throughout
- Interactive spaces delivered
